Seamless Integration between **Consignor** and **IFS Applications™**

Automation & Integration Server

TRANSFER DATA TO CARRIERS DIRECTLY FROM IFS APPLICATIONS™

TRACK AND TRACE YOUR SHIPMENTS IN DIRECTLY IN IFS APPLICATIONS™

STREAMLINE AND REDUCE COST BY ELIMINATING MANUAL WORK

Real-time Transport Administration in IFS Applications™

Handling millions of shipments per year and hosting the largest carrier library in the world, the Consignor platform is helping more than 10,000 customers choose the best solution for their shipments, regardless of which carrier, ERP, WMS or webshop they are using.

Addovation's integration makes it possible to automate the freight booking process, manage freight documents and freight label printing. Shipment information entered in IFS Applications™ is easily integrated into Consignor with a single click. Further handling of shipments can then be processed in the Consignor Portal. Shipment details are fully integrated back to be able to manage tracking and costs directly from IFS Applications™.

All tracking, logging and surveillance is handled through Addovation's own integration platform, Automation and Integration Server (AIS) in combination with serverless applications in Microsoft Azure. The AIS is a powerful server solution that can handle all types of integrations.
