OVERVIEW!

STREAMLINE YOUR TRANSPORT ADMINISTRATION!

Unifaun is a market leader within Transport Management (TM) in the Nordic market. Together with Unifaun, we have developed a standard solution for integration between IFS Applications™ and Unifaun TMS.

Our solution makes it possible to automate the freight booking processes, manage freight documents and freight label printing. Instead of entering the shipment information both in IFS Applications™ and an external

booking program, the integration will forward the booking information automatically and seamlessly to Unifaun TMS.

All tracking, logging and surveillance is handled through Addovation's own integration platform, Automation and Integration Server (AIS). The AIS is a powerful server solution that can handle all types of integrations.

Inside

Automated and efficient logistic solutions

Quote - ROL Ergo AB

The Swedish manufacturing company, ROL Ergo AB, is one of the first customers to make use of this solution.

"We are well acquainted with Addovation's integration solutions and have seen its potential in our Industry 4.0 program. With the help of Addovation and Unifaun, we look forward to a more automated and efficient logistics solution."

Stefan Brengdahl, ERP Manager at ROL Ergo AB.
